

Dental Implants

Did you know that dental implants—artificial, long-term replacements that look and feel like your natural teeth—are a good option for replacing missing teeth? Most people who are missing a tooth are candidates for dental implants, regardless of age. But there are some exceptions.

Dental implants can replace a missing tooth without harming the structure of surrounding teeth and may help preserve the jaw bone. If you're considering an implant, talk to your dentist. They can determine if you're in good health and if you have healthy gums and enough bone structure to support the implant.

Dental benefits for implants vary by plan, so before you seek treatment, be sure to check your benefit details.

You can do so by visiting DeltaDentalMN.org, referring to your plan booklet, or contacting Delta Dental customer service by calling the phone number on the back of your ID card.
