

Vaping and Oral Health

Vaping by the Numbers

- More than **10 million** adults use e-cigarettes (“vape” tobacco products)
- There was a **78% increase** in use of e-cigarettes by high school students from 2017 to 2018
- **1 in 5** high schoolers report vaping

Vaping FAQ

Are e-cigarettes safer than traditional cigarettes?

E-liquids contain nicotine and other chemicals that affect the mouth and body. More research is needed to understand all of the safety concerns

What are the risks to vaping?

Since e-cigarettes are so new to the market, there is little research on the long-term effects. But the known risks include addiction, childhood nicotine poisoning and burns caused by device explosions.

Are e-cigarettes less addictive than regular cigarettes?

In fact, some e-liquid pods contain the same amount of nicotine in a single one as an entire pack of cigarettes. Nicotine affects concentration and executive decision-making skills, particularly in the adolescent brain.

Does vaping help you to quit smoking?

For teenagers, vaping increases the likelihood of smoking regular cigarettes. Other cessation options have more research to prove their effectiveness.
